

# 3 systems working together as one

LeeO, Smart Order, and the Feed Allocation System (FAS) are all designed to work independently, however, they are even more powerful when they work together. Starting with LeeO that is focused on pigs at the farm level, then FAS that is focused on feed performance and then to Smart Order that provides a connection to the mills.

With LeeO, you can understand where pigs are and what has been happening to them. That information can be imported into FAS. Once in FAS you can have a better idea of what the actual weights are, and what the actual performance is, which allows for group placement. Pairing LeeO with FAS ensure the accuracy of these metrics with the accuracy of applied nutritional plans that can give you a clear picture of actual performance.

Once in FAS, feed performance is tracked alongside of LeeO. As producers are ordering their feed, FAS can send orders on to Smart Order for the mills to then manage in one transparent program. From individual pigs, to feed, to orders, track it all with three systems working together as one...
